**Side effects of treatments for schizophrenia can impose a significant overall burden on patients**

In a study of 1,825 participants with psychosis:

- 77% reported medication side effects
- 61% reported impairment in their daily life as a result of medication side effects
- 30% reported moderate or severe impairment in their daily life as a result of medication side effects

#### SAMENVATTING ARIPIPRAZOL, BREXIPRAZOL EN CARIPRAZINE

- Effectieve antipsychotica (vergelijking met depot, amisulpride of clozapine?)
- Mogelijk antidepressieve effecten, in ieder geval van aripiprazol en brexipiprazol bij de additie aan antidepressiva
- Relatief weinig sedatie, weinig invloed prolactine (en seksueel functioneren)
- Acathisia kan een probleem zijn, vooral bij cariprazine and in mindere mate aripiprazol
- EPS kan een probleem zijn bij cariprazine
- Relatief gunstig t.a.v. gewicht (vooral cariprazine)
- Zijn de gevonden effecten van cariprazine op negatieve symptomen klinisch relevant?
- Farmacokinetiek van cariprazine is complex, met voor en nadelen.
